Enterprise Customer Success · Technical Account Management · Technical Program Management

Dear Hiring Team,

I have built my career refusing to choose between the codebase and the customer. I operate entirely at the critical seam where deep technical development, business operations, and customer relationships meet. I bring “owner’s empathy” to every account — because I have personally carried the P&L, engineered the stack, and shipped the product.

My background is defined by this multi-disciplinary approach:

Operations & Scale: I spent a decade as General Manager of a high-volume auto auction, paying my way through my CSIS coursework. I ran live floor operations while quietly modernizing the software underneath them — and sales grew year-over-year for ten straight years. There, I learned that customer trust is not a pitch, but small deposits with the same people, week after week.

Delivery & Relationship Governance: At Black Box Code and SMPL Finance, I served as the bridge between technical architectures and enterprise clients. Architects taught me early — with hard feedback — when to defer to expertise and when to add value, and I turned that lesson into being their clean translator: protecting developers from scope churn while turning complex milestones into clear reports for decision-makers. When I sit with a client’s project owners, I am not merely sympathizing; I have carried their deadlines.

AI & Automation Systems: Most recently at Sentry Mandate, I dove headfirst into the AI shift, building custom coding agents and proof-gated automation systems from the ground up.

What I want now is a permanent home: a team where this unique blend of building and relationship management goes into helping enterprise clients choose their future instead of reacting to it.

I would love to discuss how my diverse experience can bring immediate value to your team. Thank you for your time and consideration.

Sincerely,

Jared F. Helm

Executive Résumé

jaredfhelm@gmail.com · 385-237-5056 · linkedin.com/in/jaredfhelm · github.com/jaredfhelm · sentrymandate.com

Never let the person across the table be surprised.

EXPERIENCE

Founder / AI Operations Specialist

2023 - PRES

Sentry Mandate LLC & Independent Consulting

Founded Sentry Mandate the year GPT arrived — a lifetime of operations and customer relations, pointed at the new machines. I build my own coding agents and the proof-gated systems that run them. **SHIPPED:** AIOS, tinygate, gritty, Atlas, and more (page 3).

Senior Project Manager

2021 - 2023

SMPL Finance

Took over program governance for a financial product moving faster than its process. When stakeholders demanded features engineering called impossible, I built a feature-request intake where business and technical leads aligned before anything hit the backlog — emergency mid-sprint scrambles fell by roughly half, and it ran that way for years.

Technical Project Manager

2018 - 2020

Black Box Code

I orchestrated client and internal engineering as one unit and shielded teams from scope churn. When one client's CTO treated us as a threat — no reporting line, cooperation critical — I made him a co-owner: a standing 1:1, every feature through his hands. He went from blocker to champion, and the rebuild shipped.

General Manager & Lead Systems Engineer

2008 - 2018

Auto Auctions of America

Rose from paying for school to General Manager — leading floor and office teams, modernizing the auction software and website, winning dealer and bank accounts, and selling on the floor myself. Ten straight years of year-over-year sales growth: customers for life, built on radical trust.

Early Experience

EARLY

Mrs. Fields Cookies (Corporate) · Sizzler

THE SEAM I LIVE ON

Most careers pick a side: technical or customer-facing. Mine never did — auction floor, engineering shop, finance PMO, AI lab. Every chapter, both at once.

Writing code since 1999; selling and serving since fifteen. Ownership is my empathy: I have carried payroll, runway, and launch dates — so I see the whole account the way an owner does, and I keep all the pieces moving in unison.

BEST-FIT ROLES

- Customer Success Account Manager
- Technical Account Manager
- Solutions Lead
- Technical Program Manager
- Senior PM

EDUCATION

Utah Valley University (UVU)

Computer Science & Information Systems (CSIS)
· Classical OOP coursework

Salt Lake Community College (SLCC)

Computer Science & Information Systems (CSIS)
· Coursework

HOW I RUN AN ACCOUNT

Twenty years in IT and program management, and it was never the tooling that carried me: not the Gantt charts, not the kanban boards, not the sea of reports. It was the customer. Their definition of success, seen from high enough that the whole picture fits in one frame — that is the work I love. I win when the customer does: success legible to executives and engineers alike, until delivery, renewal, and expansion are one conversation. Program after program, the fix has been the same: one shared version of the truth, and the collisions stop.

LISTEN

Learn what they are actually carrying.

Not the org-chart version: revenue targets, campaign dates, budget runway.

TRANSLATE

Bridge the two languages. Specs into business outcomes; business pressure into precise, respectful asks.

DELIVER

Make trust compound. Honest status, early escalation, and proof — renewals start from evidence.

Capability Map

jaredfhelm@gmail.com · 385-237-5056 · linkedin.com/in/jaredfhelm · github.com/jaredfhelm · sentrymandate.com

WHAT I BRING INTO THE ROOM

Customer & Account Leadership

Relationship Building · Strategic Account Acquisition

- Customer Success Planning · QBRs & Executive Business Reviews
- Renewals & Expansion · Onboarding & POCs
- Discovery & Demos · Escalation Management
- Security Questionnaires · Executive Briefings
- Voice of Customer · CRM & Pipeline Workflows

AI / Systems Automation

LLM Agents · Multi-Agent Systems · Custom Harness Building

- Task-Management Systems · Tool-Calling · RAG / Embeddings
- Model Routing · Context Engineering · Proof-Gated Automation
- Evaluation Flows · Approval Gates
- Dashboards / Internal Tools

Program & Delivery Leadership

Technical Program Management · Program Governance

- Cross-Functional Leadership · Stakeholder Alignment
- Roadmaps & Backlog Management
- Risk & Dependency Management · Budgeting & Procurement
- Vendor Management · Team Building · SDLC
- Agile / Scrum / Kanban · TDD Culture · Jira & Confluence
- ClickUp · Executive Reporting

Technical Fluency

AI-Assisted Development (Coding Agents) · Java · Rust · C++

- TypeScript · Python · SQL (PostgreSQL / SQLite)
- REST APIs & Webhooks · Git & GitHub Actions (CI/CD) · Docker
- Linux · AWS · Stripe / Billing Integrations

RECENT HANDS-ON WORK

Designed, built, and shipped by me.

AIOS

PLATFORM

Agent operating system — 1,100+ skills, a typed capability graph, and one rule: work is finished when the test passes, not when the AI says so.

tinygate

MIT · OSS

One-file, zero-dependency proof gate for AI agents — cut tokens 32% at matched quality on a 100-task benchmark.

gritty

MIT · OSS

Native Windows terminal multiplexer in Rust — no GPU, no Electron; tabs, splits, and session restore in a sub-800 KB binary.

Atlas

AGENT

An agent that safely holds an entire company in its head — any business topology absorbed into a knowledge graph, with full tool use, self-fact-checking, and read-only by design.

AI operations, project leadership, and business execution are no longer separate lanes. The companies that win will be the ones that never forget the human on the other side of the table — and build the systems that support them.
